

Cost Effective Canopy & Kitchen Deep Cleaning

For an average school setting it is essential your kitchen canopy is cleaned at least twice a year to avoid dust, dirt and grease building up and providing a potential ignition/fuel source?

Did you know that the most likely place of a school fire is within the kitchen! The London Fire Safety Audits will often request to see evidence of the cooker hood cleaning regime.

It has been a common theme that whilst schools are generally compliant on the TR19 ventilation extraction cleaning, many schools do not have adequate canopy (cooker hood) cleaning arrangements in place. Due to the volume of cooking which happens in most schools, they generally require a canopy cooker hood clean every 6 months to remove the build-up of dust, dirt and grease that can provide a potential ignition/fuel source. If this is something that you require, Juniper are able to assist through our professional and experienced specialist cleaning team ensuring that all your canopies are maintained with certification of cleaning from £450 per visit.

Our offer for high level kitchen cleaning can also include all hard to reach surfaces such as hoods, pipe work, ledges and tops of refrigerators or freezers. This can be extended to include a deep clean of all kitchen equipment, using recommended detergents, degreasers and sanitisers where appropriate.

Using the latest and most effective plant based chemicals the impact on the environment is minimised and the areas can be brought back in to service very rapidly.

Please contact Albert our Head of Cleaning Operations on 0203 373 3921 or albert.wreden@juniperventures.co.uk for a friendly, helpful and honest conversation and to arrange a site visit quotation.
